

Christopher M. Boyce

Assistant Professor
Columbia University
Department of Chemical Engineering
Email: cmb2302@columbia.edu

EDUCATION

University of Cambridge, Trinity College, Cambridge UK

Ph.D., Chemical Engineering, 2015

Advisor: Prof. John Dennis

Faculty Collaborators: Prof. John Davidson, Prof. Lynn Gladden, Dr. Daniel Holland, Dr. Stuart Scott

Honors:

- Danckwerts-Pergamon Prize for the best PhD thesis related to chemical engineering, 2015
- Gates Cambridge Scholar (2011-2014)

Massachusetts Institute of Technology, Cambridge, MA

B.S., 2011

Majors: Chemical Engineering and Physics

Minor: Nuclear Science and Engineering

Honors:

- Phi Beta Kappa Academic Honor Society
- Tau Beta Pi Engineering Honor Society
- Sigma Pi Sigma Physics Honor Society

RESEARCH EXPERIENCE

ETH Zürich

Postdoctoral Researcher, January 2017-Present

Department of Mechanical and Process Engineering

Advisor: Prof. Christoph Müller

Description: My work focuses on using ultrafast MRI to visualize flow and chemical reactions in multiphase flow systems in a quantitative and spatially resolved manner.

Princeton University

Postdoctoral Associate, January 2015 – December 2016

Department of Chemical and Biological Engineering

Advisor: Prof. Sankaran Sundaresan

Description: My post-doctoral work focused on developing computational models to derive scientific insights into the complex features of fluid-particle flows with cohesive liquid bridging and electrostatic forces.

University of Cambridge

Ph.D. Candidate, October 2011 – December 2014

Department of Chemical Engineering and Biotechnology

Advisor: Prof. John Dennis

Dissertation: *Fundamental Studies of the Physics of Gas-Solid Fluidization*

Description: My doctoral research focused on developing and validating experimental and computational techniques to reveal new insights into the hydrodynamics of fluidized beds. Experiments focused on development and use of Magnetic Resonance Imaging to visualize the physics of particle and gas flow under bubbling fluidization conditions. Computational work focused on developing and validating a 3D cylindrical Euler-Lagrange model of fluidized beds and utilizing the model to uncover fundamental aspects of the physics of fluidization, including the origin of pressure oscillations in bubbling fluidized beds.

Stanford University

Research Collaboration as Co-Founder and Engineer for Infinite Corridor Technology, LLC

August, 2008 – March 2013

Department of Mechanical Engineering

Stanford Collaborators: Prof. Beth Pruitt and Dr. Rebecca Taylor

Description: My research designed a stretchable micro-electrode using the patterned substrate technology that I invented and developed for making circuit boards stretchable and applied this technology to a Stanford project on electro-mechanical stimulation of heart cells.

Massachusetts Institute of Technology

Undergraduate Researcher, June 2009 – December 2010

Department of Chemical Engineering

Advisor: Prof. Karen Gleason

Graduate Student: Dr. Miles Barr

Description: My research used chemical vapor deposition to deposit organic electrodes necessary to create solar cells on arbitrary materials. It helped to launch the solar energy company Ubiquitous Energy.

RESEARCH ADVISING EXPERIENCE**Columbia University**

Advisor, PhD Research Projects, October 2017 – Present

- Began supervising PhD students in the Department of Chemical Engineering in October 2017. Currently supervising a PhD student on the use of MRI and computational modeling to study multiphase flows and spatially heterogeneous chemical reactions.

ETH Zürich

Advisor, Bachelor's Thesis Project, September 2017 – Present

- Supervised undergraduate student research project studying granular fingering

ETH Zürich

Advisor, Master's Thesis Project, June 2017 – Present

- Supervised Master's student research project building a system for controlled injection of single or multiple gas bubbles into a fluidized bed for study of bubble shape, motion and coalescence using ultrafast MRI

University of Cambridge

Co-Supervisor, MPhil Research Project, March 2014 – August 2014

- Supervised Master’s student research project using MRI to measure gas flow patterns in the freeboard of fluidized beds and compare against existing theories and computational models. Assisted student in learning MRI, compressed gas circulation and computational modelling techniques before he started his PhD in the field in October 2014

University of Cambridge

Co-Supervisor, MPhil Research Project, March 2013 – August 2013

- Supervised Master’s student research project comparing X-ray, MRI and PEPT imaging techniques of fluidized beds; provided input on how to properly analyze and compare data. Research project led to publication of an article in *Chemical Engineering Science*

TEACHING EXPERIENCE**ETH Zürich**

Advisor, Master’s Level Course in Granular Flow, January 2017 – June 2017

- Audited Master’s course and advised the professor on ways to improve the course

University of Cambridge

Supervisor, Heterogeneous Reactors Course, January 2013 – April 2014

- Supervised 3rd year undergraduates in groups of 2 or 3 for one-hour-long sessions going over practice problems and core concepts for advanced chemical reaction engineering course

PROFESSIONAL SERVICE

- Reviewed papers for:
 - AIChE Journal
 - Chemical Engineering Science
 - Chemical Engineering Research and Design
 - Physics of Fluids
 - International Journal of Multiphase Flow
 - Powder Technology
- External PhD thesis examiner:
 - ETH Zürich, Chen Yong, “Lattice Boltzmann simulations of fluid-solid momentum and heat transfer in gas solid flows comprising cubic particles”, 2017

ENTREPRENEURIAL EXPERIENCE**Infinite Corridor Technology, LLC**

Co-Founder and Stretchable Design Engineer, June 2007 – Present

- Invented and prototyped novel substrate designs and first-of-its-kind functioning multi-layered stretchable and flexible electronic circuit boards
- Awarded Defense Advanced Research Projects Agency (DARPA) Small Business Innovation Research (SBIR) contract
- Designed stretchable circuit boards for a wide variety of applications to pursue and/or fulfill contracts for collaborators and for customers in the biomedical, military and consumer electronics industries

HONORS AND AWARDS

- Danckwerts-Pergamon Prize for the best PhD thesis related to chemical engineering, University of Cambridge, 2015
- Gates Cambridge Scholar, 2011-2014
- 2nd Prize, third year presentation, Department of Chemical Engineering and Biotechnology, University of Cambridge, 2014
- 1st Prize, second year poster presentation, Department of Chemical Engineering and Biotechnology, University of Cambridge, 2013
- Phi Beta Kappa Academic Honor Society, MIT, 2011
- Sigma Pi Sigma Physics Honor Society, MIT, 2011
- Tau Beta Pi Engineering Honor Society, MIT, 2010
